

Increase revenue, maintain competitive advantage, and meet consumer needs through installment financing

BeyondTech should implement a customer-focused installment financing model to drive revenue growth, expand market accessibility, and improve customer retention, while proactively managing potential operational and financial risks.

Strong Market Demand

- 67% of customers prioritize financial flexibility in their purchase decisions
- Competitors offering financing models experienced 9-12% average revenue growth and higher customer retention rates

Favorable Financial Impact

- Benchmarking indicates financing models can lead to sustained profitability (competitors with 24-month plans achieved an average net profit increase of ~12%)
- Interest-charging plans (e.g., 2% over 24 months) effectively offset increased operational costs

Positive Customer Sentiment

- 77% of consumers surveyed had prior experience with financing; 76% of those who had no experience would consider it
- Survey results indicate little-to-no reputational impact due to BeyondTech's strong brand position

Risks

1. Decreased cashflows due to delayed revenue realization
2. Technical implementation complexity

Risk Mitigation

1. Maintain cash reserves and monitor cashflow activities through development and maturation of project
2. Create a cross-functional project team to evaluate existing operating models and identify high-impact areas of opportunity in advance of launch

Phased Implementation Roadmap

1	0-3 Months	Pilot & Test
2	3-6 Months	Evaluate & Refine
3	6-12 Months	Scale & Launch
